Ask your sales rep about Magid's Prescription Eyewear & Custom Logo capabilities!

ANSI D3 | Droplet Splash

ANSI D4 | Dust Protection

Frame Type		Description
Indirect Vent		Holes extend directly through the frame, but are covered by additional material to prevent fluid from entering the goggles.
Direct Vent		Holes extend directly through the frame. Prevents fogging.
Full Frame		Frame extends around the entire lens. Added strength and durability.
Half Frame		Frame attached to the top of the lens only. Provides unobstructed view.
Frameless		No frame attached to the lens. This type of safety glass is very cost-effective. Provides unobstructed view.
Lined		Lined safety glasses are impact-resistant protective eyewear that feature a foam or rubber lining to create a seal around the eyes. This "gasket" of foam offers a more secure and comfortable fit than standard safety glasses and provides extra protection against dust, debris, and other small airborne particles.
Lens Coating		Description
Uncoated (UC)		No coating applied to lens.
Hard Coated (HC)		Scratch resistant, reduces scratches that obstruct and provide longer life for the eyewear.
Anti-Fog Coating (AF)		Keeps inside of lens from fogging up and obstructing vision. Good for humid conditions.
Premium Anti-Fog Coating (x)		Keeps inside and outside of lens from fogging up and obstructing vision. Great for humid conditions.
Task Specific Lenses (Low IR lenses DO NOT meet the shade requirements of Table 1 of ANSI Z87.1 and should not be used for any type of welding application)		
Lens	Condition	Description
Amber	Low light condition	Filters out blue light to enhance contrast for better visibility
Low IR	Indirect IR radiation	Reduces Infrared (IR) light
IR	Any place where there is heat	Blocks red/infrared (IR) light
Mirror	Outdoor work	Reduces glare and bright light
Polarized	Outdoor work	Reduces glare, minimizes eye strain, increases clarity, contrast & sharpness
I/O	Indoor/Outdoor work	Transmit more visible light than typical low light glasses
