LAPCO
FR™

MODERN INDUSTRIAL WORKWEAR

WHY LAPCO?

Safety. Reliability. Purpose.

At LAPCO, we know what it takes to get the job done. That's why we are proud of the work we are doing and the products we produce. LAPCO FR distributors enjoy multiple advantages like excellent customer service, pain-free inventory acquisition, and a simplified customization process.

CUSTOMER SERVICE

Customer care is what sets LAPCO apart from the competition and makes our products and services the top choice. We are willing to go the extra mile to aid customers before, during, and after product acquisition. At LAPCO we aim for our operation to make it easy for distributors to offer the best quality garments efficiently and with competitive prices.

INVENTORY

Owning a private manufacturing plant gives LAPCO the ability to track each garment from raw material to end product. Inventory is not dependent on outsourced, contracted plants that may have questionable performance or practices. The ability to closely monitor each step of the manufacturing process is a marked advantage over suppliers who use contracted plants abroad, as process, inventory, and quality control may be reduced in those instances. Precise planning and coordination allow for twelve separate assembly lines constructing LAPCO products at any one time.

CUSTOMIZATION

We offer embroidery and digitizing, custom reflective taping, patches, emblems, and heat transfers on all of our products. These value-added services are completed before the product leaves headquarters, giving distributors a turnkey solution for their workwear needs.

SAFETY

LAPCO products are certified to meet standards set forth by NFPA 2112, NFPA 70E, and ASTM F1506. Wearer safety is top priority, and all aspects of garment construction are engineered to adhere to standards and best practices. The industries we serve are asset intensive, and we understand the importance of employee protection and product reliability. LAPCO delivers garments that meet the needs of the end-user consistently.

PROTECTION STANDARDS

NFPA 2112 COMPLIANT PRODUCTS

LAPCO FR products meet the requirements of NFPA 2112, Protective Clothing for Protection of Industrial Personnel Against Flash Fire. "Flame-Resistant Clothing for Protection of Industrial Personnel Against Short-duration Thermal Exposures from Fire".

NFPA 70E COMPLIANT PRODUCTS

LAPCO FR products are compliant with NFPA 70E Standard for Electrical Safety in the Workplace.

ANSI/ISEA 107-2015 COMPLIANT PRODUCTS

LAPCO FR Hi-Viz Shirts (Pages 8-11) have been evaluated by third party testing and were found to meet the requirements of ANSI/ISEA 107-2015.

ASTM F1506 COMPLIANT PRODUCTS

LAPCO FR products meet the requirements of ASTM F1506, Protective Clothing for Electrical Workers. "Standard Performance Specification for Textile Materials for Wearing Apparel for Use by Electrical Workers Exposed to Momentary Arc and Related Thermal Hazards."

PERFORMANCE FEATURES

Ultra-Breathable

provides relief from scorching temperatures while delivering 5x more breathability than cotton.

Industrial Wash

engineered to stand up against heavy wear and wash conditions.

Inherent Protection

flame-resistance is a built in characteristic of the fabric, the fibers are engineered to be flame-resistant before being woven into fabric, no treatment is needed.

Wind Resistant

the outer shell's polyurethane (PU) laminated film works as a wind barrier, preventing wind from penetrating the fabric.

Lightweight & Durable

the fabric content allows for a more durable garment while maintaining lightweight comfort.

Stretch Fabric

the fabric content allows these garments to move and flex with you for comfort, fit, and mobility.

Moisture Wicking

quickly moves (wicks) sweat to the fabric's outer surface and dries rapidly, keeping you comfortable and allowing your body to regulate its temperature efficiently.

Anti-Odor

anti-odor fabric technology captures and blocks or kills odor-causing bacteria, neutralizing the bacteria before it interacts with sweat and reducing body odor.

Water Resistant

the outer shell has two barriers against moisture: a DWR finish on the outside and a polyurethane (PU) laminated film inside.
